

## TT AirShooter

The TT AirShooter is the device to thread the tail at press section. It consist in a manual device that can be directed against the roll from where the tail must be threaded, it consist in a movable device with an air blow nozzle and a guide plate. The device

cut the tail with the air and address it either to the next press or in ta dryer. The fully manually operation leads to a very flexible device, orientation, time to thread and flying angle is left to the operator choice, so that there is full control of any parameter.

Both the tail detaching, flying and landing of the tail are managed by air flows. Single point air flow regulators make the equipment easily tuned to any peculiar Customer's condition.
